## Northern Illinois Spoonpluggers

Meetings will be held at the VFW in McHenry 3002 w. IL. Rt. 120 the first Wednesday of "Every month" 7:30pm-9:00pm April-December

Southern Wisconsin Lakes are producing some good catches of Muskie, Walleye and Northern Pike. The larger fish are being caught at about 20 feet and deeper. Some Spoonpluggers are hitting fish on Lakes that were previously no trolling lakes. It's time to expand our horizons and start exploring some new lakes now that trolling is legal. Lakes in Kenosha and Racine counties in Southern Wisconsin that have good quality lakes that aren't too big and are an hour or less drive for most Spoonpluggers in Illinois. Many of these lakes are literally untouched by Spoonpluggers and are loaded with fish.

## Fishing Facts editor, Carl Malz From Buck Perry's H.S.C. Mental Aspects

"Recently" We have witnessed an attempt to make 'structure' synonymous with DEEP WATER or DEEP WATER STRUCTURE FISHING. Whoever said structure existed ONLY in deep water? Structure is wherever you find it. Sometimes it's in the deep; sometimes it's in the shallows; sometimes it's in between! A large number of fishermen associate 'structure fishing' almost exclusively with DEEP WATER fishing. For years FISHING FACTS has persuaded most fishermen to devote more time toward deep water structures and now find most anglers deserting the shallows almost ENTIRELY. Buck Perry has said time and time again: 'The fish are either in the SHALLOWS the DEEP or somewhere IN BETWEEN. Carl still believed that the lunker fish will be caught near the deep water area's for the majority of the fishing season but the deep water fishermen are likely to be missing out on some fast action and on some good sized fish because they keep passing up the shallows near these deep water area's before they start working the deeper water structures that most of the time you need to be right on the money to make a great catch in a short period of time.
